Introduction to L^AT_EX

for “Word users”

Heath James and Guy Kloss
IIMS Seminar, 28 March 2007

`{h.a.james | g.kloss}@massey.ac.nz`

LaTeX can save about two months formatting time off the average 3–4 year PhD writing cycle.

Introduction to LaTeX for “Word users”

IIMS Seminar - 2007-03-28

TeX and LaTeX?

- **TeX** is a computer program created by Donald E. Knuth. It is aimed at typesetting text and mathematical formulas.

ki Pūrehuroa

Institute of
Information &
Mathematical Sciences

TeX and LaTeX?

- **TeX** is a computer program created by Donald E. Knuth. It is aimed at typesetting text and mathematical formulas.
- **LaTeX** is a macro package which enables authors to typeset and print their work at the highest typographical quality, using a predesigned, professional layout. LaTeX was originally written by Leslie Lamport. It uses the TeX formatter as its typesetting engine.

Why use LaTeX?

- Portability (Unix, Linux, Windows, MacOS, Amiga OS, DOS, ...)
- Flexibility (lots of packages)
- Precise Control
- Quality of Output (e. g. math formulas)
- Can be used to write documents in any language

Support for any Language

LaTeX vs. Word

LaTeX vs. Word

- Suitable for large projects
 - clear, explicit separation: content \Leftrightarrow style
 - ease with which a table of contents, bibliography and index can be generated
 - ability to split books, etc. into smaller (more manageable) pieces that are easily combined once writing is complete

LaTeX vs. Word

- Suitable for large projects
 - clear, explicit separation: content \Leftrightarrow style
 - ease with which a table of contents, bibliography and index can be generated
 - ability to split books, etc. into smaller (more manageable) pieces that are easily combined once writing is complete
- Stability and interchangeability of documents (as opposed to Word 6 vs. Office 95 vs. Office 97 vs. Office 2000 vs. Office XP vs. ...)
- No pressure to **upgrade NOW OR ELSE!**
- No Word viruses

Math Equations

- Word:

$$\iiint_G [u \nabla^2 v + (\nabla u, \nabla v)] d^3 V = \oiint_S \left(u \frac{\partial v}{\partial n} + v \frac{\partial u}{\partial n} \right) d^2 A$$

- LaTeX:

$$\iiint_G [u \nabla^2 v - v \nabla^2 u] d^3 V = \oiint_S \left(u \frac{\partial v}{\partial n} - v \frac{\partial u}{\partial n} \right) d^2 A$$

Producing a Simple Document

Guy K. Kloss

Massey University
AUCKLAND

Introduction to LaTeX for “Word users”

IIMS Seminar - 2007-03-28

Producing LaTeX Documents

- For now, we will start with a simple, empty (text) document.
- Usually you start out by filling stuff into a skeleton document.
- Then you learn as you go.

Producing LaTeX Documents

- For now, we will start with a simple, empty (text) document.
- Usually you start out by filling stuff into a skeleton document.
- Then you learn as you go.
- LaTeX is more WYMIWYG (What You Mean is What You Get) than WYSIWYG.
- The time invested initially will be very well gotten back at later times.
 - Less annoyances in formatting ...

Simple Document

Te Kunenga
ki Pūrehuroa

```
\documentclass [a4paper,12pt]{article}
```

```
\usepackage {...}
```

```
% -----
```

```
\begin{document}
```

```
% -----
```

•

•

•

```
% -----
```

```
\end{document}
```

Necessary Steps to produce a document

**TeX/LaTeX
program**

**device
driver**

**short cut:
pdflatex**

LaTeX File Types

Te Kunenga
ki Pūrehuroa

- **.tex** LaTeX or TeX input file. Can be compiled with **latex**.
- **.sty** LaTeX macro package. This is a file you can load into your LaTeX document using the “**\usepackage**” command.
- **.cls** Class files define what your document looks like. They are selected with the “**\documentclass**” command.
- **.dtx** Documented TeX. This is the main distribution format for LaTeX style files.
- **.ins** Is the installer for the files contained in the matching **.dtx** file.

LaTeX Installation under Windows

How to set up LaTeX for Windows (1)

- **Step One – MiKTeX**

<http://www.miktex.org/>

- **Step Two – Ghostscript and GSview**

<http://www.cs.wisc.edu/~ghost/>

- **Step Three – Acrobat Reader**

<http://www.adobe.com/products/acrobat/readstep2.html>

How to set up LaTeX for Windows (2)

• Step Four – Windows Editor:

- **TeXnicCenter** (open source) 
<http://www.toolscenter.org/>
- **WinEdt** (share ware, Massey site license) 
<http://www.winedt.com/>
- **SciTE** (open source)  
- **LaTec plugin for Eclipse** (open source)   
- **emacs, vi, ...** (open source)   

Support Programs (1)

- Viewers
 - DVI
 - xdvi, kdvi, ...
 - PDF
 - Acrobat Reader
 - GhostView
 - xpdf, kpdf, ...
- Support Tools
 - BibTeX
 - GNUPlot
 - xfig, ...

Support Programs (2)

- Other Tools

- Reference Manager

- **JabRef** (open source, Java)

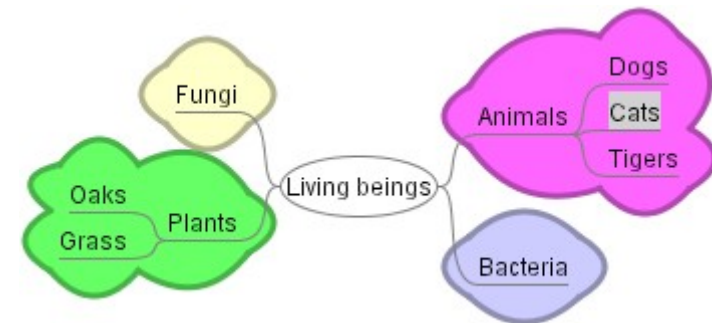

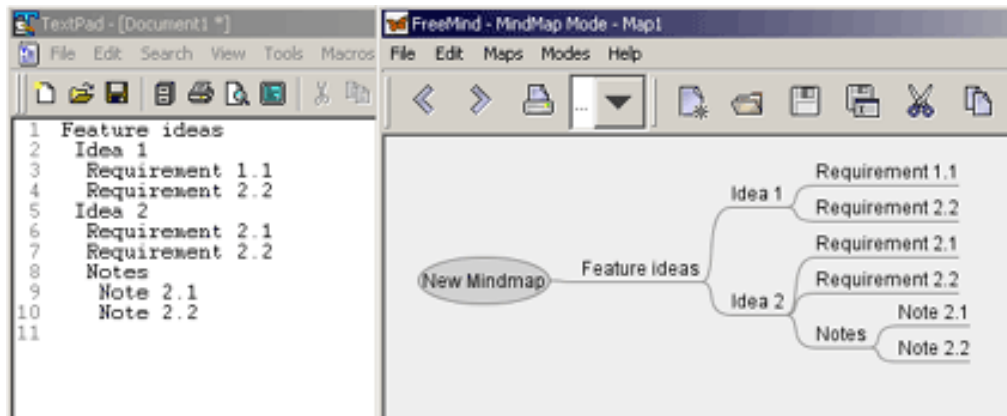

- <http://jabref.sourceforge.net/>

- Mind Manager

- **FreeMind** (open source, Java)

- <http://freemind.sourceforge.net/>
